

DevHive

Team Members: Saeed Haddad, Alaa Al-Taher

Supervisor: Dr. Ahmad Al-Tamimi

Graduation Project - Summer 2024

Introduction

DevHive is an innovative freelancing platform designed specifically for developers in Jordan. It aims to connect talented developers with clients looking for high-quality tech solutions, fostering a vibrant community of professionals and businesses. With a honey-themed design symbolizing productivity and collaboration, DevHive provides an intuitive and user-friendly interface that streamlines the process of finding and offering freelance services. Whether you're a developer seeking new opportunities or a business in need of expertise, DevHive offers a tailored solution to meet your needs.

Problem Statement

In the age of the digital era, people assume that being involved in the tech industry means having a stable job with high salaries. Unfortunately, this is not the case anymore; layoffs in tech companies are taking a toll on developers worldwide and it's only a matter of time until it hits the Jordanian market; due to the layoffs, some developers choose to join startups compromising their payments, others start their businesses which prove to be quite tricky, and some might even change career paths.

Approach

Figure: Iterative Development

Features

Project Listings: Clients can post detailed project listings, specifying the skills required, project scope, deadlines, and budget. Developers can browse these listings and apply for projects that match their expertise.

Advanced Search Filters: Clients and developers can use advanced search filters to quickly find projects or talent that match specific criteria, such as skill set, budget, location, or project type, making the platform more efficient and user-friendly.

Integrated Chat System: DevHive includes an in-platform chat system that allows developers and clients to communicate in real-time. This feature supports text, voice, and video communication, ensuring clear and efficient collaboration. The chat system also keeps a record of all interactions, making it easy to reference previous conversations and agreements.

Interactive Maps for Local Projects: DevHive features an interactive map integration, allowing clients to find developers within specific geographic locations. This is particularly useful for projects requiring local knowledge or in-person collaboration. Developers can also use the map to discover nearby opportunities and network with other professionals in their area.

Notification System: DevHive includes a comprehensive notification system that keeps users informed of important updates and activities on the platform. Developers and clients receive real-time notifications for new messages.

Conclusion

DevHive is a comprehensive freelancing platform tailored for developers in Jordan, offering secure payments, collaboration tools, and real-time communication. It provides developers with the resources and opportunities to succeed in a competitive market, fostering growth and innovation in the local tech ecosystem.
